Summary

- NA49 continues with widespread physics program
- 40 *A*GeV Pb+Pb Results
  - Change from pion-suppression to enhancement rel. to p+p
  - Strangeness / pions higher than in 158 *A*GeV

    non-monotonic behaviour $\rightarrow$ phase transition?
  - HBT-Radii similar to 158 *A*GeV
  - Charge fluctuations similar at both energies

    $D^* \approx 4$ (uncorrelated pion gas)
