Centrality Determination for p + Pb

- measure number of slow protons ($0.15 < p < 1 GeV/c$)
  by target detector and TPC

- interpret via model calculations
  mean number of projectile collisions ($\bar{\nu}$)

- 3 event classes

class	detected slow protons	$\bar{\nu}$
min	no selection	3.7±2.5
int	2–6	4.3±2.5
cen	> 7	5.7±2.5
